# Speed Through High-Traffic Superhighways

Araknis routers provide a high-speed connection that makes for a hassle-free network experience, along with a cloud-based device management software that gives your integrator the option for remote troubleshooting. Araknis Networks® understands the importance of modern, seamless connectivity, which is why we focus on one thing: making your net work.
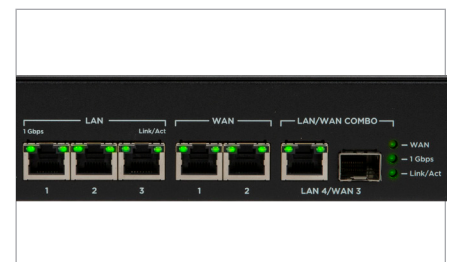

FEATURES

THE NEED FOR SPEED

When it comes to networking, every second counts. That's why our routers come equipped with Gigabit Internet support, for faster speeds and a better experience.

IRON-CLAD INTERNET

An embedded firewall supports Stateful Packet Inspection (SPI), Denial of Service (DoS) prevention, WAN Request Blocking, OpenVPN, and content filtering. Its layers of network security make it harder for hackers to attack, so all your private data stays secret.

RELIABLE CONNECTION

Multiple WAN ports allow you to connect to two or more ISPs (for example: AT&T Fiber and Comcast), so you'll never lose your connection in the case of service failure.
